- a plurality of information dots having various information are disposed by setting a key dot as a representative point, wherein an information dot is disposed at an end point of a vector, wherein a start point of the vector is set at a center surrounded by the lattice dots of four points

and wherein the plurality of information dots are arranged in accordance with a predetermined rule by a dot code generation algorithm to thereby generate a dot pattern; and

the block which configures the dot pattern is imported as image data by a camera, and, from a numerical value which was calculated by digitizing the image data, information, and a program outputted.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
